Summary

Results-driven Full Stack Software Engineer with hands-on industry experience at BotCalm Private Limited. Currently an Undergraduate in Electrical and Information Engineering at the Faculty of Engineering, University of Ruhuna. Specialized in cross-platform mobile development using Flutter and React Native, with strong expertise in front-end engineering and backend development. Passionate about building high-performance applications and continuously expanding knowledge in AI/ML and workflow automation using n8n.

Work Experience

Associate Mobile Software Engineer

Aug 2025 – Present

Botcalm Pvt Ltd

- Developed a blockchain-based cryptocurrency wallet and trading application using Flutter.
- Implemented scalable state management architecture using BLoC for predictable state transitions and maintainable code structure.
- Published and maintained mobile applications on Google Play Store and Apple App Store, including release management, app signing, store compliance, metadata preparation, and deployment workflows.

Mobile Software Engineer Intern

March 2025 – Aug 2025

Botcalm Pvt Ltd

- Contributed to the development of a blockchain-based mobile application and an AI-driven mobile application using React Native.
- Implemented scalable state management using Redux to handle complex application states and asynchronous data flows.
- Built responsive and performance-optimized mobile interfaces following modern React Native architecture patterns.

Projects

ReelVista Mobile App ▶ [🔗](#)

July 2026 – Present

- Developed a comprehensive movie discovery and entertainment mobile application using Flutter for seamless cross-platform performance.
- Integrated the TMDB API to fetch real-time, extensive movie data and implemented Firebase for backend services including user authentication, Firestore database, and push notifications.
- Integrated Google Mobile Ads (AdMob) for monetization and optimized video playback and UI/UX design to ensure a smooth, high-quality user experience.

Fuel Management System 🔒 🔒 🔒

Dec 2024 – Present

- Built a full-stack fuel quota management platform with a React web dashboard, an Expo mobile app, a Node.js/Express backend, and MongoDB for vehicle owners, station owners, operators, and admins.
- Implemented secure account onboarding with email OTP verification and role-based access flows across web and mobile clients.
- Built QR-based vehicle validation, fuel-issue transactions, quota tracking, approval workflows, transaction logs, and cross-platform notification flows.
- Designed n8n automation workflows using webhooks and scheduled triggers to send account-created emails, fuel receipt emails after each transaction, and daily station-owner summary notifications.

Job Seeker Mobile App 🔒

Dec 2025 – Feb 2026

- Developed a cross-platform job marketplace mobile app using Flutter and Firebase with secure user onboarding, email/password and Google sign-in authentication, and profile management.
- Implemented real-time Firestore workflows for posting jobs, applying with custom messages, managing work

requests, and updating application/job statuses.

- Built secure in-app messaging with AES-GCM message encryption, Firestore security rules for protected access, and app lock using biometrics/PIN.

LottoVision: Sri Lankan Lottery Ticket Scanner & Result Checker

Oct 2025 – Jan 2026

- Built a cross-platform Flutter mobile app to scan lottery tickets from camera/gallery and extract draw number, number sets, and lucky sign using Google ML Kit OCR with custom parsing logic.
- Integrated NLB and DLB result sources (Dio + HTML parsing) , synchronized draw history, and implemented automatic ticket–result matching.
- Developed a prediction module using an ML-ensemble approach, with Hive local caching, Riverpod state management, push/local notifications, and English/Sinhala/Tamil localization.

IoT Device Threat Detection System using Machine Learning

Jan 2024 – Nov 2024

- Developed anomaly detection model with autoencoder algorithm to detect anomalies in real time in a network flow.
- Created a machine learning model by training the CIC IoT 2023 dataset to detect seven IoT threats.
- Developed the frontend for the final-year project to display the trust value of connected devices in a network and implemented a position-changing feature based on the trust score using React Js.

Education

University of Ruhuna

March 2020 – 2026

B. Sc. (Hons) Engineering Final Year Undergraduate

- Department of Electrical and Information Engineering, University of Ruhuna.

Skills

Programming Skills: Java, C++, C, Python, JavaScript, Dart

Database: MySQL, MongoDB, Firestore (Firebase)

Frontend Frameworks: React, React Native, Flutter

Backend Frameworks: Node.js, Express.js

State Management: Redux, Bloc, Cubit

Tools and Technologies: CSS, HTML, Bootstrap, Object-Oriented Programming (OOP), Figma

Interpersonal Skills: Teamwork, Time Management, Critical Thinking, Video/Photo Editing

Automation & Integration: n8n, REST APIs, Webhooks, Postman

Extracurricular Activities

Teakwondo

Jan 2022 – Nov 2024

Green Junior Belt Holder

- Member of Faculty Teakwondo Team

AIIESEC

Jan 2021 – Jan 2023

University of Ruhuna

- IGT Team Member Winter Term 21.22 and OGT Team Member Summer Term 21.22

Declaration

I hereby attest that the above information is true and correct to the best of my knowledge.
